Greater Louisville Project

ADVANCING A COMPETITIVE CITY

Move Louisville into the Top Tier

The Greater Louisville Project is a non-partisan, civic initiative organized by The Community Foundation of Louisville and sponsored by a consortium of foundations and funders. Its mission is to act as a catalyst, providing research, data analysis and civic dialogue to engage the community in a shared agenda for long-term progress.

Additional data on indicators in the Competitive City Report and related topics, including data covering the entire Metropolitan Statistical Area for many measures, are available at www.greaterlouisvilleproject.org.

The level of the challenge,

the need to act, the potential for success—all are clear in this, the Greater Louisville Project's second biennial Competitive City Report.

The data-based public report card again measures Louisville's actual performance and relative standing on key economic and social indicators, ranging from education attainment and life expectancy to income and housing costs.

It documents both encouraging progress and troubling trends. But it primarily underscores the need to **accelerate the pace of change to redefine Louisville as a skilled and educated community that claims its place in the top tier of American cities.**

What the report can't document is the unprecedented focus, energy and collaboration now being dedicated to those challenges by the broad array of governmental, non-profit and civic institutions that have embraced the Competitive City Agenda first outlined in the Brookings Institution report, "Beyond Merger: A Competitive Vision for the Regional City of Louisville."

Since releasing that report five years ago, the Greater Louisville Project has enlisted thousands of citizens and scores of community groups in discussion. It has organized a **web-based Competitive City Action Network to track the many initiatives underway** to attain it. And it has entered into emerging partnerships with a growing list of dynamic civic groups and leaders.

Deep Drivers of Change

This report, and those to follow every two years, are designed to provide Louisville and its civic leaders with the information needed to track progress, adjust focus and celebrate success in the long-term effort to lift Louisville into the top tier of America's economically successful and socially vibrant cities.

Research commissioned by the Greater Louisville Project has identified Deep Drivers of Change—key steps with the greatest promise to strengthen the community's competitive standing by 2010.

Big but attainable goals, the Deep Drivers are fundamental in their potential to move the Louisville region forward in

education, jobs and balanced regional growth. See graphic below.

The Deep Drivers were derived from comparisons of the rates of change from 1990 to 2000 on key socioeconomic measures in Louisville and its peer cities. Researchers at the University of Louisville calculated what it would take for Louisville to move into the top five on each measure if every other city sustained its earlier rate of progress through the end of this decade.

Louisville's drive for progress already has produced encouraging results. Over the last five

years, the city moved from 11th to 8th among its competitors on two key measures:

- Though the actual numbers were lower than projections, steady increases in the proportion of young adults holding bachelor's degrees lifted Louisville from the bottom tier to the middle of its peers on that important indicator.
- A \$4,300 increase in median family income produced equal change on that economic indicator.

Deep Drivers: Key Steps to Strengthen the Community

1. Improve education at all levels

- Double projected growth in the number of young adults with a bachelor's degree to 10,000.
- Attain the goal of Every1Reads and adopt world-class standards in math and science education.
- Bring about comparable increases in high school graduation, associate degrees and technical certificates.

Education

2. Grow 21st Century Jobs

- Increase projected growth in professional and technical jobs by 15,000 and raise the median family income.

Jobs

Growth

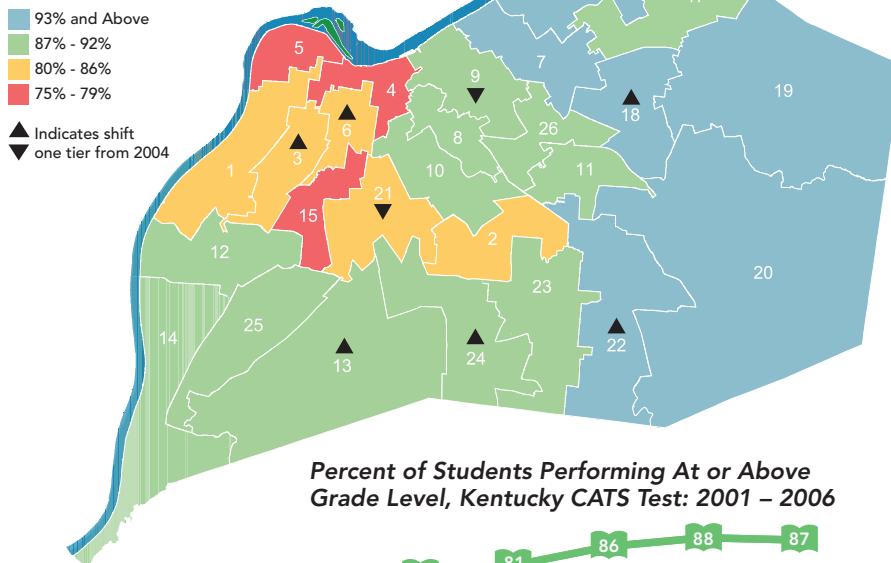

3. Balance Regional Growth

- Think and act more as a region and strengthen the core of Louisville Metro as the regional hub.

Better Scores Across the Map

Students reading at or above grade level by Metro Council District, 2006.

The drive to make good

on Louisville's commitment to ensuring a solid education for all children accelerated with measurable progress.

The Every1Reads initiative to ensure that every child is reading on grade level within four years has produced tangible gains, despite disappointing second-year results. Significant improvement occurred among children in southern and western neighborhoods, where progress has been slow. An equally ambitious challenge from the GE Foundation calls for adopting world-class standards to transform math and science education.

All the data, however, underscore the persistent academic gaps between races and social classes that plague American education. Although quality preschool is widely regarded as one key to reducing such disparities, the percentage of 3- and 4-year olds in any form of preschool has fallen.

Higher Education

Accelerating by Degrees

With higher education and advanced training

ever more crucial, Louisville climbed out of the bottom tier and into the middle in its 2005 rankings against peer cities on the percentage of young adults who hold a bachelor's degree or higher.

The pace of change is striking: Although their numbers are small, a third of adults age 25-34 in Louisville Metro now hold at least a bachelor's degree, compared to just under 23% in 1990. Even more are earning associate degrees and technical certificates.

One eye-catching statistic:

Louisville ranks high on the percentage of residents who have some college, implying a large population that enters higher education but does not graduate—a potential target for action.

Despite the gains, the overall education levels for the Louisville Region's prime workforce still lag its top competitors by a large margin, and the push to "Graduate Greater Louisville!" needs to shift into high gear.

The interplay between education and jobs presents a conundrum: the necessity to grow high-skill jobs even as the community raises education attainment to meet the demand for higher skills.

The momentum building with investments downtown and new commitments to arts and recreational assets enhance Louisville as a vibrant city for young professionals and also a very livable community for families.

But all of that promise has not yet produced a transformation in the city's economic and demographic profile. The push to grow 21st Century jobs yielded a slight gain in the number employed in professional, technical and managerial positions but not enough to change the city's low relative standing on that measure or to raise average wages compared to other cities.

The downtown renaissance gained momentum on every front: housing, upscale hotels, clubs and restaurants, agreement to build a multi-purpose arena and plans for Museum Plaza, while the City of Parks extends the legacy of magnificent green space to suburban areas.

Pulling Up to the Top Tier

Louisville's large proportion

of working-class families continues to be buffeted by economic pressures, but the median income for families has risen. In fact, this significant measure rose enough to lift the community from the bottom to the middle tier among its peers in 2005 data.

Simultaneously, however, the number of low-income families also increased, as did the percentage of young children living in poverty, which stands at 28%. Housing costs grew more rapidly than incomes, resulting in a significant jump in foreclosures and pushing to 24% the proportion of families who spend more than a third of their income for shelter.

Homelessness also spread,

vividly illustrated by the 6,000 homeless students enrolled in the public schools, a six-fold increase since 1993.

With the worsening crisis in health care, the number of families without health insurance continued to grow, and a recent study documented stark disparities across areas of the county in life expectancy, the ultimate health indicator.

Louisville takes great pride

in its neighborhoods, and increasing home values show it's more than lip-service.

Appreciation in the median home value edged Louisville up among its peers. Most importantly, values have risen in revitalized western and southwestern neighborhoods that had lost residents in recent decades.

The rate of homeownership,

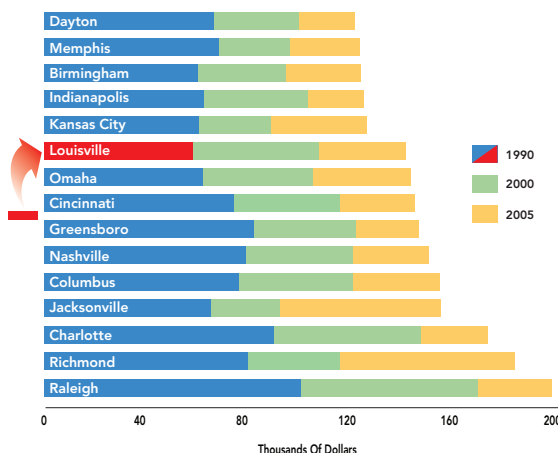

a prime indicator of neighborhood stability, produced an anomaly in 2000 that continued through 2005: the rate continued to drop among African-Americans, while it rose among white families here and among both groups in other cities.

Louisville's crime rate continues to be one of the lowest among its peer cities, but 2005 data showed a slight uptick following steady declines over the last decade.

Growth Pattern Shifting

Louisvillians have traditionally

put a high value on the cohesion and convenience that allows them to enjoy both big-city amenities and a small-town atmosphere. Both are at risk without vigorous efforts to achieve balanced growth across the metropolitan region.

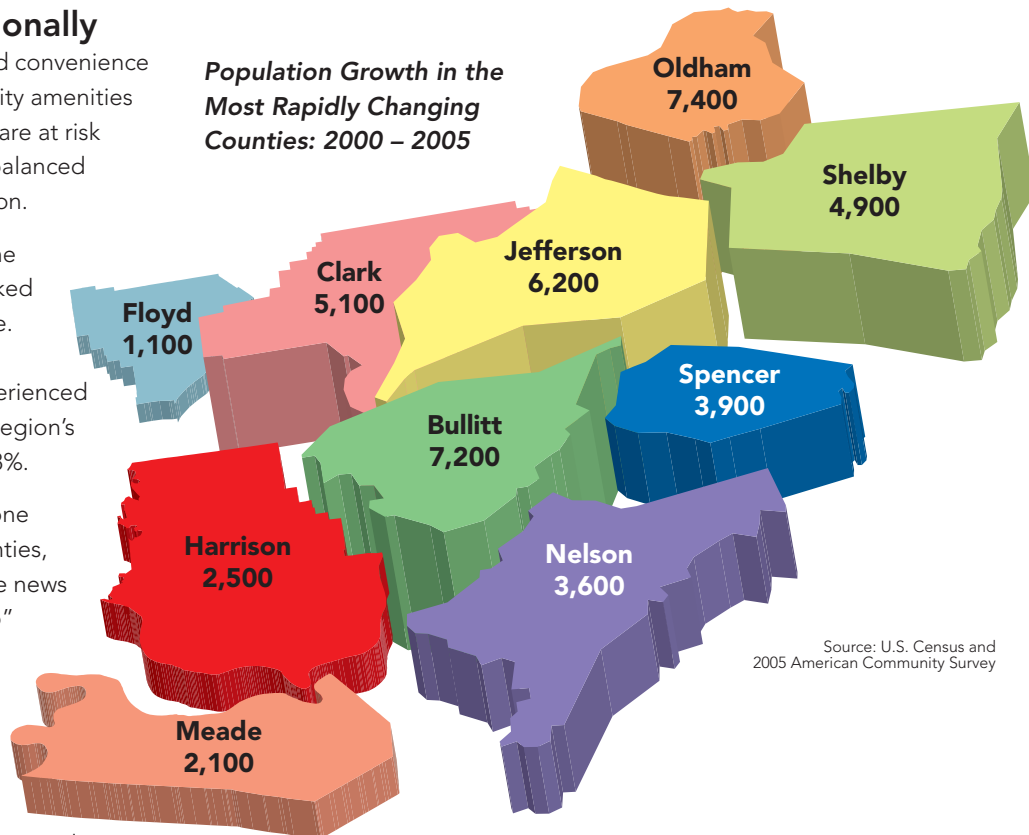

The pace and extent

of the community's outward expansion picked up during the first half of this decade. While Louisville Metro experienced some growth, outlying counties experienced far more, and the city's share of the region's population dropped to just under 58%.

Indeed, Spencer County ranked as one of the country's fastest growing counties, and Crawford County, Ind., made the news for having the highest rate of "exurb" commuting in the nation.

On the environment, Louisville had trouble complying with tougher federal standards on particulate pollution despite its long push for cleaner air, and traffic congestion worsened even as the average among its peer cities leveled off.

Greater Louisville Project

ADVANCING A COMPETITIVE CITY

The Competitive City Action Network

connects the dots between education, a skilled workforce, jobs and opportunities for families, a strong core city and balanced growth across the region.

The Greater Louisville Project laid the groundwork for stepping up the pace of change by identifying “Deep Drivers” of change and creating a Web-based map of strategies underway to achieve them.

The initiatives mapped at www.greaterlouisvilleproject.org represent groundbreaking efforts to redefine Louisville as an educated and skilled community, strengthening its competitive position and improving quality of life and prospects for the future.

Fix the Basics

K-12 Education

Louisville’s strong and stable public schools and record of steady improvement build momentum behind the commitment to ensure that all children achieve at high levels.

Call to Action

- Support the Competitive City Action Network
- Align the goals of civic groups and organizations
- Unite behind the goal:

Move Louisville into the Top Tier of American Cities

Invest in Working Families

Assets, Income, Health

Shoring up working families strengthens the social fabric of the community. Affordable housing, income supports, financial services and assets can make the difference.

ADVANCING A COMPETITIVE CITY

Good To Greater Louisville

Louisville has distinguished itself

as a community that can set a big goal and stick to it. Now is the time to build on that success and move forward. The Deep Drivers of Change are fundamental in their potential to accelerate the pace of progress by 2010:

Improve Education at all Levels

- Double the increase in young adults with a bachelor's degree to 10,000.
- Attain the goal of Every1Reads and adopt world-class standards in math and science.
- Bring about comparable increases in high school graduation, associate degrees and technical certificates.

Grow 21st Century Jobs

- Increase projected growth in professional and technical jobs by 15,000 and raise the median family income.

Balance Regional Growth

- Think and act more as a region and strengthen the core of Louisville Metro as the regional hub.

The way is clear to unite behind this powerful civic agenda and redefine Louisville as a skilled and educated community that claims its place in the top tier of American cities.

Acknowledgements

The Greater Louisville Project is a non-partisan civic initiative sponsored by a consortium of foundations and funders that includes The James Graham Brown Foundation, W. L. Lyons Brown Foundation, Brown-Forman, The C. E. & S. Foundation, The Annie E. Casey Foundation, The Community Foundation of Louisville, Gheens Foundation, and The Humana Foundation.

Its mission is to act as a catalyst, providing research, data analysis and civic dialogue to engage the community in a shared agenda for long-term progress. It is overseen by a Policy Board that includes Matthew Barzun, Gordon R. Garner, Sylvia W. Jaegers, David A. Jones Jr., Daniel W. McMahan, Sammy L. Moon, Michael B. Mountjoy, Steve O. Moya, W. Barrett Nichols, Sharon A. Receveur, C. Dennis Riggs, William E. Summers, IV, and James S. Welch Jr. An Advisory Committee of community leaders and a technical team of data specialists provide ongoing guidance.

The report was prepared by the staff of the Greater Louisville Project in partnership with The Brookings Institution Metropolitan Policy Program. Carolyn Gatz, director, Lockett Davidson, Rosanne Kruzich, Valerie Salley, and Debbie Wesslund.
